The Experts in Refrigeration

Precision from the beginning

Only our highly skilled and trained engineers are responsible for manufacturing the chillers. All construction instructions must be competed before each and every build goes into production. Streamlined and effective component storage practices ensure all parts can be available for each individual assembly.

State-of-the-art computers at every production station document the most important information and transfer all the necessary parameters to the regulation of each cooler. Every individual device is subject to a single test with test protocol for performance and function checks before being packaged for delivery.

Take advantage of our experience

We are specialists for:

- Recirculating coolers
- Commissioning
- Configuration and specialist design
- Training
- Planning
- Maintenance
- Laboratory technology
- Repair
